Kawarabayasi,Y., Yamazaki,J., Hino,Y., Kikuchi,H. and Director-General of Biotechnology Center.

Direct Submission

Submitted (17-MAY-2002) Director-General of Biotechnology Center, Direct Submission

National Institute of Technology and Evaluation, Biotechnology Center; Nishihara 2-49-10, Shibuya-ku, Tokyo 151-0066, Japan (E-mail:bio@nite.go.jp, Tel:81-3-3481-1933, Fax:81-3-3481-8424)

Kawarabayasi, Y is officially affiliated with the National Institute of Advanced Industrial Science and Technology, Tsukuba, Ibaraki, 305-8566 Japan

Nakamura, Y., Ikeo, K., Suzuki, M. and Mashima, J. are at the National Institute of Genetics, Mishima, Shizuoka, 411-8540 Japan Itch, T. is at the Japan Biological Information Research Center, Koto-ku, Tokyo, 192-0092 Japan

Nishio, Y., Usuda, Y. and Sugimoto, S. are at the Ajinomoto Co., Inc., Kawasaki, Kanagawa, 210-8681 Japan

Nishio, Y., Usuda, Y. and Sugimoto, S. are at the Ajinomoto Co., The other authors are at the National Institute of Technology and Evaluation, Shibuya-ku, Tokyo, 151-0066 Japan.

o;
The present sequence is that of the novel lysR2 gene of Corynebacterium glutamicum strain ATCC 13032. The gene codes for LysR2 protein (see AAM51006), a transcription regulator of the LysR family. The gene was identified in a cosmid gene library of ATCC 13032 using algorithms and sequence analysis programs. Vector pCR2.11ysR2int, which carries an internal fragment (see ABA91927) of the lysR2 gene, is claimed, and is deposited in Escherichia coli stain TOPIOF/pCR2.11ysR2int as DSM 13617. Also claimed are coryneform bacteria in which the lysR2 gene is attenuated, preferably eliminated, especially by deletion. These bacteria attenuated for the production of L-amino acids. Insertional mutagenesis of the lysR2 gene in the lysine producer C glutamicum BDM 5715 and the valine producer Brevibacterium lactofermentum FERM BP-1763 using vector pCR2.1lysRint in Emproved production of L-lysine and L-valine,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  351
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    300
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      360
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          891

sequences from the Corpnetors bacterium Corpnebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of corpnetors bacterium maeauring expression amount and analysing the expression profile or expression pattern of a gene derived from the expression profile or expression pattern of a gene derived from corpnetorm bacterium. Corpnetors are useful for producing amino acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office

The present invention provides a number of nucleotide and protein sequences from the Coryneform bacterium Corynebacterium glutamicum. These are useful for identifying the mutation point of a gene derived from a mutant of coryneform bacterium, measuring expression amount and analysing the expression profile or expression pattern of a gene derived from Coryneform bacterium, and identifying a homologue of a gene derived from coryneform bacterium, and identifying a homologue of a gene derived from acids, nucleic acids, vitamins, saccharides and organic acids, particularly L-lysine. The present sequence is a nucleic acid described in the exemplification of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from the European Patent Office
                                                                                                                                                                                                                                                                                                                                      Novel polynucleotides derived from Coryneform bacteria, for identifying mutation point of a gene, measuring expression of a gene, analyzing
